

## **OGS Community of Researchers**

Please introduce yourself. Respond to at least two others. How do you define "research?"

My name is Obed Alcime. I define research as documented data that is a result of evidential experiments used to prove, disprove, hypothesize, or correlate an idea. This data should be reviewed by licensed or degreed experts in the related field of said theory. Furthermore, this data can be used to support, correlate, or disagree with a related or contrary topic or theory of another, by another. In layman's terms, research is an original work that becomes re-searchable by others.
